# VOLUME CONTENTS

## Volume 13, Number 1

| | | |
|---|---|---|
| **Robert E. Austin** | 1 | Designing the Space Transfer Vehicle (STV) |
| **G. E. Lozino-Lozinsky, L. M. Shkadov** and **V. P. Plokhikh** | 11 | Reusable aerospace system with horizontal launch |
| **M. Andrenucci, G. Baiocchi, W. Deininger** and **A. Trippi** | 25 | DIVA: flight demonstration of a 1 kW arcjet propulsion system |
| **A. Gany** and **Y. M. Timnat** | 33 | Auxiliary solid rocket propulsion for hypersonic vehicles |
| **Leonard A. Harris, Judith H. Ambrus** and **Rodney A. Hemmerly** | 37 | In-space technology experiments—prerequisite for missions of the future |
| **Masafumi Miyazawa** | 53 | Japan's launch vehicle development program for space applications |
| **F. del Campo** and **J. I. Ruiz Urien** | 61 | Collapsible Tube Mast—technology demonstration program |

## Volume 13, Number 2

### COLUMBUS VIII SYMPOSIUM ON SPACE STATION UTILIZATION

| | | |
|---|---|---|
| | vii | Preface |
| **W. Wild** | 77 | Opening Address |
| **Heinz Stoewer** | 79 | Welcome Address |

### THE COLUMBUS PROGRAMME AND PRECURSOR MISSIONS

| | | |
|---|---|---|
| **Fredrik Engström** | 81 | Columbus Programme Overview |
| **W. U. Klein** and **V. Sobick** | 83 | Columbus Precursor Spacelab missions |

### USER SUPPORT AND GROUND INFRASTRUCTURE

| | | |
|---|---|---|
| **C. Mirra, T. A. E. Andersen, H. T. Blume, M. P. A. M. Brouwer, L. D'Angelo, H. Duwe, N. Eilersen, M. Gaida, M. Herten, T.-H. Iversen, C. Jungius, M. C. Limbourg,** | 87 | User support for the Columbus Precursor Missions |

**C. Lockowandt, A. Loria, G. Macé, P. de las Morenas, A. Perret, S. Porschen, I. Sneed, I. Thomas, E. Tillberg, F. Unz, P. Vielcanet, B. Visser** and **K. Wittmann**

**Giovanni Rum, Claudio Canu, Luciano Battocchio** and **Mario Cardano** — 95 The role of the APM Centre to support Columbus Precursor Flights

**R. Fortezza** and **K. Wittmann** — 103 Telescience opportunities in the precursor flights

**H. T. Blume, T. A. E. Andersen, M. P. A. M. Brouwer, L. D'Angelo, H. Duwe, N. Eilersen, M. Gaida, M. Herten, T.-H. Iversen, C. Jungius, M. C. Limbourg, C. Lockowandt, A. Loria, G. Mace, C. Mirra, P. de las Morenas, A. Perret, S. Porschen, I. Sneed, I. Thomas, E. Tillberg, F. Unz, P. Vielcanet, B. Visser** and **K. Wittmann** — 111 The refined decentralized concept and development support

**Klaus Berge** — 117 Ground infrastructure and astronaut matters

**K. Wittmann** — 121 The Microgravity User Support Centre

**R. Monti** and **C. Mirra** — 125 Microgravity Advanced Research and Support (MARS) Center update

COLUMBUS PAYLOADS: SCIENTIFIC REQUIREMENTS

**D. T. J. Hurle** — 129 Gravity-related phenomena in materials science

**Jürgen Stegemann** — 135 Columbus payload requirements in human physiology

**R. Monti** and **L. Carotenuto** — 139 Fluid Science users requirements

**P. L. Bernacca** — 145 European space science and Space Station Freedom

**C. Signorini** — 151 Columbus payload user requirements: technology

PAYLOAD OPERATIONS

**Karl Ludwig Mueller** — 155 Payload operations for Precursor Mission E1

**D. Heyland, A. Kellner** and **R. Timm** — 161 COMPASS: a *COM*puterized *PA*yload operations *S*upport *S*ystem for Columbus

**Simonetta Di Pippo** 171 The strategic role of automation and robotics for Columbus utilization

MIR MISSIONS

**W. Riedler** 175 The joint Austro–Soviet space project AUSTROMIR-91

**Th. Benke, O. Koserenko** and **F. Gerstenbrand** 181 COGIMIR: a study of cognitive functions in microgravity

**A. Persterer, M. Berger, C. Koppensteiner, C. Müller, M. Nefjodova, M. Opitz** and **P. Schnider** 185 AUDIMIR: directional hearing at microgravity

**Ch. Mueller, L. Kornilova, G. Wiest** and **L. Deecke** 193 OPTOVERT: an AUSTROMIR 91 experiment. Orientational effects from optokinetic stimulation

**H. Tuschl, R. Kovac, W. Klein, E. Ott, Y. I. Voronkov** and **M. Chaidakow** 199 Influence of microgravity on immune system and genetic information

**H. Binnenbruck, H.-W. Gronert** and **C. Nitzschke** 205 Mir'92 project

209 Appendix A—Scientific Programme

213 Appendix B—List of Participants

**Volume 13, Number 3**

**Kuniaki Shiraki, Fumio Otsuki, Kazuyuki Tasaki, Naoki Sato, Nobuyuki Tomita, Hirojirou Shiozawa** and **Nobuji Nishino** 215 JEM technology developments

**George D. Hopson** and **Richard L. Grant** 231 Pressurized modules for Space Station Freedom

**T. Darlington, K. Krukewich** and **D. Laurenzio** 245 Integrating the Space Station Remote Manipulator System into the Space Station Assembly Process: the challenges and techniques

**C. S. Griner** and **S. R. Noneman** 255 Space Station Freedom payload operations in the 21st century

**F. D. Riel** and **G. Markus** 263 Pre-integrated truss assemblies for Space Station Freedom

**Luciano Basile** and **Giovanni Rum** 277 The mini pressurized logistics module: a candidate element for Italian participation in the Space Station Freedom logistics scenario

| | | |
|---|---|---|
| **H. D. Froning Jr** and **P. A. Czysz** | 285 | Impact of emerging technologies on manned transportation between Earth and space |
| **Dan Eimers** and **Karen Kakazu** | 291 | Is bigger always better? An economic study of U.S. ETO vehicle architectures |
| **V. Weldon** and **L. Fink** | 301 | Near-term two-stage-to-orbit, fully reusable, horizontal take-off/landing launch vehicle |
| **V. Ya. Neiland** and **R. C. Parkinson** | 311 | The An-225/Interim Hotol launch vehicle |
| **H. K. H. Grallert** and **W. Berry** | 317 | Progress in ESA Winged Launcher Configurations Studies |
| **Ernst W. Messerschmid** and **Alexander Weigand** | 329 | How to enhance safety for future space transportation systems |
| **Delma C. Freeman Jr, Alan W. Wilhite** and **Theodore A. Talay** | 349 | Advanced manned launch system study status |

**Volume 13, Number 4**

| | | |
|---|---|---|
| **G. Scott Hubbard, Paul F. Wercinski, George L. Sarver, Robert P. Hanel** and **Ruben Ramos** | 363 | A Mars Environmental Survey (MESUR): feasibility of a low cost global approach |
| **M. J. Mahoney** | 371 | Four NASA submillimeter-wavelength space-astrophysics missions |
| **Wendell W. Mendell** | 383 | A mission design for International Manned Mars Mission: [from the 1991 International Space University (ISU) Design Project] |
| **G. W. Su, D. U. Choi, R. J. Drean, C. R. Edelsohn, J. G. Gurley, F. A. Hagen, P. B. Landecker, M. L. Tillman** and **C. R. Wassgren** | 395 | Engineering challenges for unmanned lunar exploration |
| **David Buden** and **Joseph A. Angelo Jr** | 403 | The roles and functions of a lunar base Nuclear Technology Center |
| **Kunio Nakamaru, Hiroshi Kitahara, Yasuro Kanamori, Akio Tsujihata, Koji Terada, Toshinari Yoshinaka** and **Shin-ichirou Ichikawa** | 411 | Technologies for Japan's Engineering Test Satellite-VI |
| **Peter A. Swan** and **Paul N. Cloutier** | 423 | Global personal communications this decade with IRIDIUM[tm] |

| | | |
|---|---|---|
| **Roberto Fedi** and **Francesco Martinino** | 427 | The European DRS ground segment: an infrastructure for space communications of 2000s |
| **W. J. Alldridge** | 437 | High performance pointing control system development at British Aerospace for astronomy platforms in space |
| **G. Mardine, H. Lamarre, D. Duhamel** and **I. Lanoe** | 445 | Computer simulations for the development of navigation systems for spaceborne applications |

**Volume 13, Number 5**

| | | |
|---|---|---|
| **W. J. D. Escher, J. L. Moses, S. H. Gorland** and **F. W. Stephenson** | 457 | Status of NASA's Earth-to-Orbit Propulsion Technology Program |
| **Robert Rosen, Gregory M. Reck** and **Gary L. Bennett** | 467 | Applications of nuclear propulsion to Mars missions |
| **M. Rigault, J. Baldeck, S. Pothier, C. Pauron** and **R. Zendron** | 479 | Comparison of combined cycle propulsion systems for TSTO airbreathing launchers |
| **Alain Wagner** and **Jean-Pierre Bombled** | 491 | Oriflamme: a reference airbreathing launcher to highlight areas that are technological drivers for hypersonic vehicles |
| **H. D. Froning Jr** | 503 | An interstellar exploration initiative for future flight |
| **Ugur Ortabasi** | 513 | A hardened solar concentrator system for space power generation: photovoltaic cavity converter (PVCC) |
| **R. Bryan Erb** | 525 | Power from space for the next century |

**Volume 13, Number 6**

| | | |
|---|---|---|
| **D. Müller-Wiesner, H. Mahal, R. Köper** and **R. Schubert** | 535 | Materials and manufacturing technologies for bi-propellant satellite tanks |
| **D. C. G. Eaton** and **E. Slachmuylders** | 545 | Potentials and problems when considering the use of advanced structural materials for space applications |
| **R. A. Bowler, P. Truss** and **B. J. Oke** | 553 | The European Polar Platform |
| **R. Holdaway** | 561 | U.K. instruments for Mission to Planet Earth |
| **Marguerite Schier, JoBea Way** and **Benjamin Holt** | 569 | Applications of the EOS SAR to monitoring global change |
